

Same interior, different daily routes

65 x 89 in CLEAR wall-face rectangle in both views / front at bottom / same scale

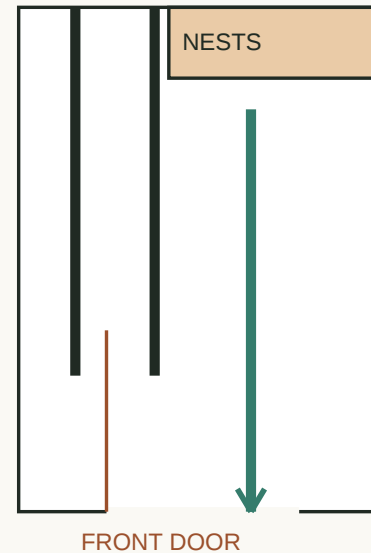

A / Front collection

A: short collection route; remove both bars to clean the rear floor.

26.5 in front lane ends before roosts. Test the real container and reach.

B / Rear collection

B: side service route; walk farther to collect at the rear nest face.

Two 65 in bars now run lengthwise. Check reach beneath them; this is not a build variant.

Green: service / bedding-out route | Orange: nest unit | Dark: roost bars

Bird fit, ventilation, feed/water access and usable clearances still need checking. No capacity is assigned.

My clear width / depth: _____ Door + equipment conflicts: _____

Next physical test: _____ Feed/water location and access: _____

A uses Walk-In v1.1.0 fittings. B is an editorial alternative only. Care principles: OSU Extension, Backyard chicken coop design.
